

Purpose: Audio-Digest Foundation CME/CE activities are designed to provide its learners a^“ physicians and other healthcare professionals a^“ with continuing education that will help identify clinical problems in their practice settings, provide content to help to solve those problems, and increase their application of knowledge to practice. Audio-Digest Orthopaedics is specifically designed to provide the participant with state-of-the-art information on, including, but not limited to, the diagnosis and management of: Upper extremity disorders Fractures Dislocations Total joint arthroplasty Orthopaedic infections Spinal disorders Orthopaedic trauma Tumors of the bone and soft tissues Sports medicine Congenital anomalies Nontraumatic bone and joint disorders Foot disorders Nervous system disorders The goal of this program is to improve the management of rotator cuff (RC) injuries and identify candidates for surgical RC repair (RCR). After hearing and assimilating this program, the clinician will be better able to: 1: Identify the essential skills of arthroscopic RCR and summarize techniques to master them. 2: Evaluate the data on the use of single-row surgical RCR vs double-row RCR and recognize the importance of tissue tension in RCR. 3: Contrast double-row RCR with single-row RCR and identify the biomechanical, anatomic, and clinical reasons why double-row surgical repair may be preferred technique. 4: Review the evidence-based clinical guidelines for the management of RC injuries and identify specific indications and contraindications for surgical RCR. 5: Identify appropriate patients for surgical repair of massive RC tears and recognize the indications for tendon transfers, partial repair, reverse arthroplasty, and debridement.
