

# Parental Use of Corporal Punishment and Development of Aggression in Children

2300 Words: Corporal punishment is a controversial topic within early childhood development. Pediatric recommendations clash with parental rights and personal values, as well as community attitudes towards punishment methods and discipline. Corporal Punishment is widely accepted in the United States as a common and effective method for parental discipline with 90% of American parents reporting the use of corporal punishment at least once. This widespread practice may contribute to the development of aggression in children.
