

Warfarin reduces the activity of both vitamin K dependent clotting factors and the natural anticoagulant proteins C and S. The anticoagulant response is usually obtained after 5 to 7 days of treatment. In the treatment of thrombosis, low molecular weight heparin (LMWH) in therapeutic doses is used concomitantly with warfarin. LMWH is not stopped until the INR (international normalised ratio) has been within the therapeutic range for 2 days.

Anticoagulant therapy without an existing thrombosis, for example in atrial fibrillation (AF), is started with warfarin alone unless the patient has a known specific thrombophilic disorder. The possibility of bleeding must be borne in mind after trauma, particularly when the head, neck, back or torso have been injured, and monitoring of the clinical condition, INR and blood picture must be arranged. The frequency of INR monitoring should be increased when a new medication is started, an old one is stopped or its dosing changed (INR after 3-5 days), as well as when there is a sudden change in the patients condition. In exacerbating heart failure INR has the tendency of rising, and thus the need for warfarin is reduced. In hypertension, warfarin must only be used when normotension has been achieved. A patient who manages warfarin treatment and its monitoring well may go over to self-monitoring; after sufficient guidance he/she can adjust the warfarin dose him-/herself within defined limits.

Warfarin is the most widely used oral anticoagulant in Australia. Although it can prevent.

Warfarin (Coumadin) - UpToDate Although warfarin is still considered the mainstay of oral anticoagulant treatment, it is a difficult drug to manage due to its narrow therapeutic index.

Practical tips for warfarin dosing and monitoring - Cleveland Clinic Monitoring patients on warfarin therapy is challenging. The tools highlighted here—from online forums and Web-based dosing calculators to patient education

Warfarin therapy: in need of improvement after all these years vitamin K cycle. Laboratory monitoring of warfarin therapy is mandatory, since the agent has a relatively narrow therapeutic range. The therapeutic efficacy is of

Monitoring warfarin therapy in patients with lupus anticoagulants. How to manage warfarin therapy Issue 2 Volume 38 Australian Intern Med. 2001 Dec40(12):1183-8. Optimal intensity of international normalized ratio in warfarin therapy for secondary prevention of stroke in patients with

A Patients Guide to Taking Warfarin Apr 1, 2015 Long-term treatment with warfarin is recommended for patients with atrial fibrillation at risk.

Recommended Therapeutic Range for Warfarin Therapy Recommended Therapeutic Range and Duration of Warfarin Therapy. Diagnosis. Target INR. Duration. Deep Vein Thrombosis. (transient risk - 1st episode).

Managing warfarin therapy in the community Issue 4 Volume 24 At a Glance. Approximately 3 million Americans are on vitamin K antagonist therapy (VKA) for a variety of clinical conditions, including thrombophilia, cardiac

A review of warfarin dosing and monitoring - NCBI - NIH J Cardiovasc Nurs. 2006 May-Jun21(3):169-75 quiz 176-7. Factors influencing patient knowledge of warfarin therapy after mechanical heart valve replacement.

Bleeding Associated with Warfarin Therapy - The Clinical Advisor For patients with a first episode of DVT secondary to a reversible risk factor, 3 months of warfarin therapy is recommended. For patients with a first episode of

What to do when warfarin therapy goes too far. - NCBI Jan 16, 2016 Monitoring warfarin therapy using the INR can be challenging in some patients
